

ELECTRIC BRANDING TOOL

Permanently identify office and computer equipment

PERMANENT BRANDING OF WOOD, PLASTIC, LEATHER AND RUBBER

Branding with heat using a Wallbrand™ Branding Tool is an economical way to permanently identify leather, wood, rubber and many types of plastics. A branded impression on these materials will outlast a label, tag or ink-stamped mark. Branders can permanently identify many "high-theft" items such as computer equipment, audio & video components, office machines, furniture, etc.

Wallbrand electric branding tools are heavy-duty and suitable for most industrial branding applications. Performance features include:

- Cartridge type heating element that is an efficient, durable heat source.
- Solid cast bronze branding head to transfer heat effectively.
- Heat resistant handle and built-in tool stand for safety (hand-held models).

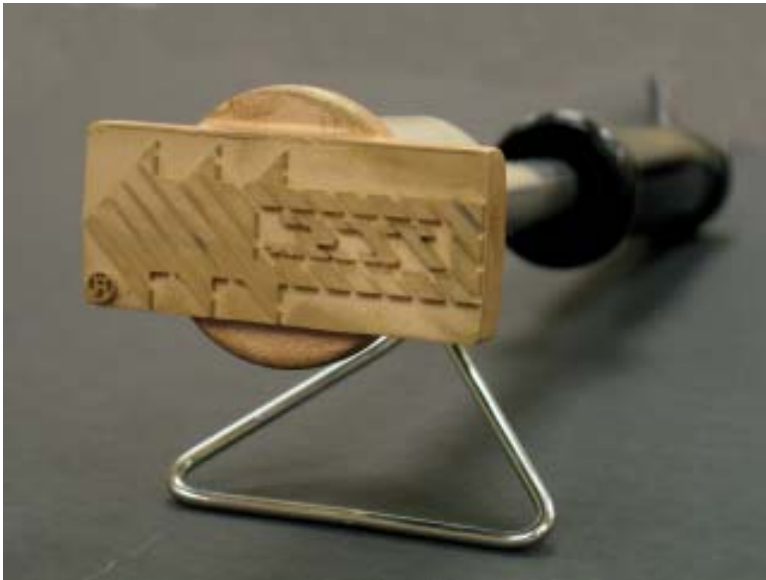

Wallbrand offers a full line of branding tools. To determine the right model for your needs, consider the material to be branded, volume of marking required, size of the mark and whether the branded mark must change frequently. Based on this information we'll help you select the brander that's right for you.

WALLBRAND™ MODELS AND HEAD TYPES

HAND-HELD BRANDING TOOL

For most applications, Wallbrand hand-held branding tools are available in three models that provide branding temperatures from 700°F to 1250°F. Select a branding head that best suits your needs below.

DRILL PRESS BRANDING TOOL

For semi-automated production, this model is designed for repetitive branding of wood, plastic, etc. with less operator fatigue. With a simple jig and a few adjustments, uniformly branded items are easily accomplished. Wallbrand's "dual disk" design keeps the tool's heat from rising into the drill's chuck and bearings, preventing dry-out of lubricating oils.

TEMPERATURE REGULATOR

Highly recommended to control the tool's temperature and prolong the life of the heating element, especially if the tool sits idle for long periods.

LOGO HEAD

Reproduce your logo or emblem up to 2 x 3". Good quality artwork is necessary for best results.

STANDARD HEAD

For branding of fixed text up to 2 x 3". Character size up to 1" high.

SLOTTED HEAD

For changeable messages, codes, etc. Heads with one or two slots take interchangeable type from 3/16 to 1" high.
