# Rinz Off® and Sudz Off® Temporary Markers

Ever need to make temporary marks and paint over them easily? Regular felt-tipped markers and paint markers leave marks that are almost impossible to remove. When painted over the ink bleeds through the paint resulting in costly re-painting or scrapped parts.

Our new RINZ OFF® and SUDZ OFF® temporary markers were designed specifically for this problem. They make durable, non-permanent marks on bare metal. Later, ink marks can be removed and painted over without bleeding through or “ghosting”.\* They’re perfect for temporary identification of metal surfaces or parts. Used in quality control, leak notation, pass-fail, in-process tracking and many other applications.

Used in quality control, leak notation, pass-fail, in-process tracking and many other applications.

Makes marks or “touches” that can easily be removed with water or in a water bath. Marks leave no “ghosting” or bleeding when painted over. Will not react with paint systems.\* Dry time 45 seconds to 1 minute.

Stocked in black. Red, blue & green available.

A water-resistant marker that makes a temporary mark on bare metal surfaces. Withstands a wet environment. Marks stay on until removed with soapy water containing detergent with a pH level of 10 or more.\* Dry time 15 to 20 seconds. Stocked in black & white. Red, blue, green & yellow available.

\* Test ink marks for removal before extensive use.
